Quick Release Pins

Ring-Grip Quick Release Self-Locking Pins

These dependable pins are easily inserted and released without tools. Excellent for equipment that needs frequent assembly and disassembly.
A spring-loaded ball protrudes beyond the diameter of pin shank. Pushing and pulling action causes the ball to sink below the shank for quick insertion and removal. A ring is attached to the pin for easy grip. Available in zinc-plated steel (C1144 or equivalent) and in 303 stainless steel.
Additional sizes are available. Specify 98320A883 for zinc-plated and 98404A888 for stainless steel.
Also specify the diameter and the exact grip length to the nearest tenth of an inch.
